Cementing restorations successfully

Multilink N creates a strong and durable bond to all types of restorative materials.

The luting composite Multilink N from Ivoclar Vivadent is universally used for the cementation of restorations. It comes in an automix syringe, which allows the exact amount of material required to be dispensed.

The self-curing luting composite with light-curing option is universally applicable. It is suitable for the adhesive cementation of all types of indirect restorations made of metal, metal-ceramic, lithium disilicate, glass-ceramic, composite and zirconium oxide ceramic.

Strong and durable bond

Multilink N is capable of establishing a strong bond to different kinds of restorative materials: on glass-ceramics and silicate ceramics, Multilink N is applied in combination with a silane (Monobond-S), and when metal and oxide-ceramic restorations are cemented, Metal/Zirconia Primer is additionally used. The tooth cavity is conditioned with the self-etching Multilink N Primer A/B. This product simplifies the cementation procedure, as it eliminates the need for a separate etching step with phosphoric acid. The self-etching and self-curing Multilink N Primer A/B not only ensures high bond strength but also improves dentin sealing quite considerably. Moreover, it supports the long-term clinical success of the restoration, as it positively influences retention, marginal discolouration, the prevention of secondary caries and fracture resistance.

Convenient dispensing system

The automix syringe is very convenient to use. It allows the exact amount of material needed to be dispensed directly on the restoration. In addition, the luting composite features a consistency that is ideal for application and cementation. Compared to mixing capsules, the automix delivery form saves considerable time. No additional accessories, such as a capsule injector, capsule activator or mixing unit are required. Moreover, the total amount of material that can be dispensed is not limited by the contents of the capsule.
